

# Did *you* know?

## TailWrap™

A well cared for tail is a striking image. However, a **horse's tail can easily be damaged during breeding or from excessive rubbing in the stall or trailer.** Professional's Choice offers the ultimate in tail protection. Due to its unique padded half cone that extends to the top of the tail bone, the Professional's Choice TailWrap™ protects new hairs that are most susceptible to breaking. In addition, the non-slip lining and three adjustable hook fasteners ensure that the wrap remains securely in place where it is most needed. TailWrap™ should be removed every four to six hours, allowing the horse's tail to breathe.

*Available in multiple colors.*

## Quick-Wrap® Bell Boots

**Bell boots protect against self inflicted wounds caused by overreaching.** It is common for an active horse to injure their hooves or surrounding soft tissue while in turnout or under saddle. To prevent hoof related injuries Professional's Choice has a versatile bell boot for complete protection and quick application. The Quick-Wrap Bell Boots offer 360 degree protection, overlapping in the back for additional shock absorption, covering the coronet band and bulb. These easy to apply boots take only seconds to secure and are designed to prevent rubbing or turning. The Quick-Wrap Bell Boots are made to work exclusively with Professional's Choice protective boots, including VenTECH Elite SMB and splint boots (sold separately).
